authentication of at least one provider of the computer network services at the specified wireless hotspot from the communications device; identifying wireless computer network services available at the specified wireless hotspot; authenticating the at least one provider of the wireless computer network services available at the specified wireless hotspot responsive to the request from the communications device; and preparing authentication information for use by the communications device in communicating with the at least one wireless computer network". Applicant's independent claim 10 comprises a particular combination of elements, which is neither taught nor-suggested by prior art.

Applicant's independent claim 14: The present in invention is directed to a non-transitory storage medium storing a computer-readable program code thereon, the computer-readable program code being arranged to cause a computer system of a cellular communications provider, the independent claim identifies the patentably distinct feature, "receive a request for authentication of at least one provider of the computer network services at the specified wireless hotspot from the communications device; identify wireless computer network services available at the specified wireless hotspot; authenticate the at least one provider of the wireless computer network services available at the specified wireless hotspot responsive to the request from the communications device; and prepare authentication information for use by the communications device in communicating with the at least one wireless computer network". Applicant's
